

Pneumohydraulic Terminal Crimping Machine

RSM-PTC-200

Feature

- ▶ Pneumohydraulic terminal crimp machine is a new crimp device that combines the advantages of pneumatic and oil pressure technologies and can work with the pneumatic power without hydraulic station or oil pressure motor.
- ▶ This machine adopts air pressure + oil pressure pressurization principle, which can crimp connection firmly via flexible pressure. The pressure can be slightly adjusted via
- ▶ Adjustment valve and pressure can be observed through the pressure gauge.
- ▶ Rapid clamping design of die heads of applicator and various die heads can be configured.
- ▶ Safety cover is equipped to ensure safety.

Specification

Model	RSM-PTC-200
Crimping Force	20T
Stroke	50mm
Wire cross section	25 ~ 250mm ²
Pressure stroke of Oil pressure	10mm
Air pressure	0.5MPa (0.3-0.7MPa)
Weight	200KG
Power	AC220V 50/60Hz
Dimension	L322 mm x W405mm x H935mm
